Xenomatrix®

Innovative collagen hydrogel

H42® is the innovative collagen hydrogel for the treatment of periodontal and peri-implant pockets.

Prevents bacterial recolonisations

Facilitates the natural healing

Usable with a wide range of needles

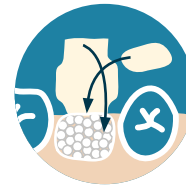

User friendly

Xenomatrix®

Three-dimensional collagen matrix

Xenomatrix® is the three-dimensional collagenic matrix for the treatment of gingival recessions and to favour the soft tissue healing in post-extractive socket procedures.

It is the ideal scaffold for soft tissue cells

It avoids palate graft harvest

Completely resorbable

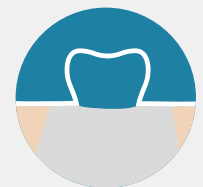

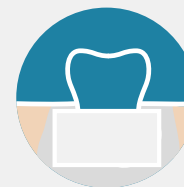

OSTE OXENON®

Collagenic bone substitutes

FLEX CORTICAL SHEET

Cortical sheets

Osteoxenon® is the complete line of bone substitutes with fully preserved collagen and mineral components that get completely remodeled with patient's bone in physiological time. Flexible Cortical Sheets can adapt to every type of defect due to their intrinsic flexibility.

It is more natural

It is biomimetic

It is completely remodeled
